ageGroup.json; casesubtype.json; js and html files.zip;

Dear Arun,

1)lowerAge,upperAge needs to be sent from the front end, lowerAge and upperAge need to be passed as parameter in the below URL. I have attached the JSON file ageGroup.json for your reference

[http://localhost:8081/apis/criminal-search-based-on-age?
nameParam=baskar&parentParam=kumar&lowerAge=40&upperAge=60&pageNo=1&noOfRecordsP
erPage=5](http://localhost:8081/apis/criminal-search-based-on-age?nameParam=baskar&parentParam=kumar&lowerAge=40&upperAge=60&pageNo=1&noOfRecordsPerPage=5)

Changes in the existing procedure call based on casetype and address -

1)group by casetype needs to be changed from casetype to subcasetype and I have attached casesubtype.json for your reference

2)Since age filter needs to be applied for the whole page, the lowerAge and upperAge parameters needs to be passed in the below URL, and the URL needs to be changed from

[http://localhost:8081/apis/criminal-search?
nameParam=baskar&parentParam=kumar&pageNo=1&noOfRecordsPerPage=5](http://localhost:8081/apis/criminal-search?nameParam=baskar&parentParam=kumar&pageNo=1&noOfRecordsPerPage=5)

[http://localhost:8081/apis/criminal-search?
nameParam=baskar&parentParam=kumar&pageNo=1&noOfRecordsPerPage=5&lowerAge=40&uppe
rAge=60](http://localhost:8081/apis/criminal-search?nameParam=baskar&parentParam=kumar&pageNo=1&noOfRecordsPerPage=5&lowerAge=40&upperAge=60)

kindly make changes in the code to get the parameter values then I will make changes in the spring code.

I have attached the updated js and HTML files and Kindly revert back if you have any queries.

Regards,

Immaculate M
